

**SINGLE-TO-DOUBLE  
LED CONVERSION KIT**

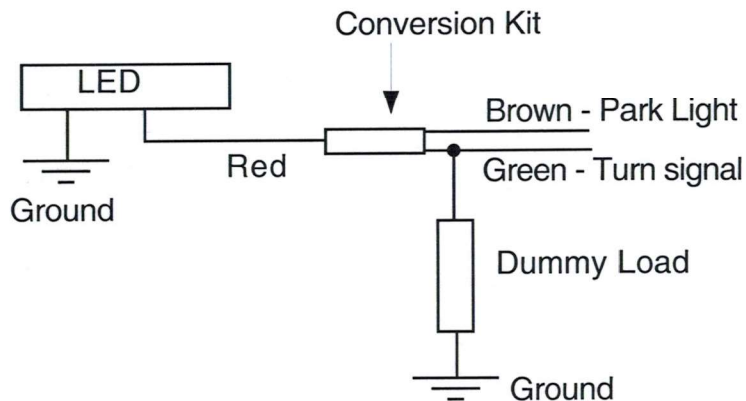

**#L-JE02**

This kit converts designated "single filament" LED lights to work like a double filament light. It is designed specifically for use with designated LED's and is not intended to be used with any other units.

Thank you for buying a StreetWorks product. Be confident that it will provide the quality and performance that you demand for your car. *Please read and understand all installation instructions before beginning.* Planning and preparation will make the actual installation process easy and quick.

DISCONNECT ELECTRICAL POWER AT THE BATTERY  
BEFORE DOING ANY WIRING!

Connect the red wire to the + feed for the LED, the yellow wire is the feed for the turn signal (full brightness), the black wire is the feed for the park light (reduced brightness). Our unit may be wired in anyplace between the light switches (under the dash) and the LED itself. (NOTE: A dummy load - NOT included in this kit - may be needed to make your standard flasher work correctly with LED's. It's correct connection is shown below for clarity. If needed, you will need two dummy loads, one each for the left and right sides which can be wired with the front or rear turn lights.)
