Manufactured by Watson's StreetWorks Rod & Custom Products

Thank you for buying a StreetWorks product. Be confident that it will provide the quality and performance that you demand for your car.

Please read and understand all installation instructions before beginning.

Planning and preparation will make the entire process easy and quick.

DISCONNECT POWER AT THE BATTERY BEFORE DOING ANY WIRING!

NOTE: This indicator requires an electrical sending unit in order to work. It will also be easier to connect the indicator unit to the sending unit if you use one of StreetWorks Indicator Hook-up Kits #L14S-CONN.

- 1. Determine where you want to mount the Indicator Plate. Carefully mark and cut an opening just large enough to clear the LEDs at the back of the plate. See diagram.
- 2. Trial fit the Indicator into the opening and modify as needed.
- **3**. Wire the LEDs through the hole as follows: RED wires to sending unit (+) outputs and BLACK wires to ground.
- **4**. Use a <u>small</u> amount of RTV or epoxy to secure the plate. Hold or tape in place until set.
