

- 1. Determine the Location** for the switches in your door panel or console. Make sure you have proper depth behind them.
- 2. Cut Switch Holes** using the template/ dimensions **carefully** mark and cut holes.
- 3. Mounting** once the hole is cut insert the switch panel. Then use the L shaped brackets to grab the back of the upholstery and tighten the nuts so the L bracket just start to bend.
- 4. Do the Wiring.** The polarity reversing module can be located in the kick panels, under the dash or in the doors. In the door makes for the least number of wires going in-and-out of the door (2 wires "in" for console mounting + 2 crossover wires for in driver door mounting, not counting additional remote control or other switches), but the polarity reversing module must be protected from moisture. Always ground to a good chassis ground, not inside the door. Complete the wiring per the diagrams on the reverse side. The switch and frame will be attached to the panel, so leave ample wire to allow panel removal.
- 5. Reconnect the main power and test your wiring.** For switches not oriented correctly for UP/DOWN, reverse either the yellow wire leads or the orientation of the switch in the panel.

**2+1 Switch Dimpled Power #PW-5T Window Switch Kit**  
 Illuminated Double and Single Billet switches and frame with lead wires and 2 polarity reversing modules. Adapt directly for use with (+) output remote controls – no additional relays needed.

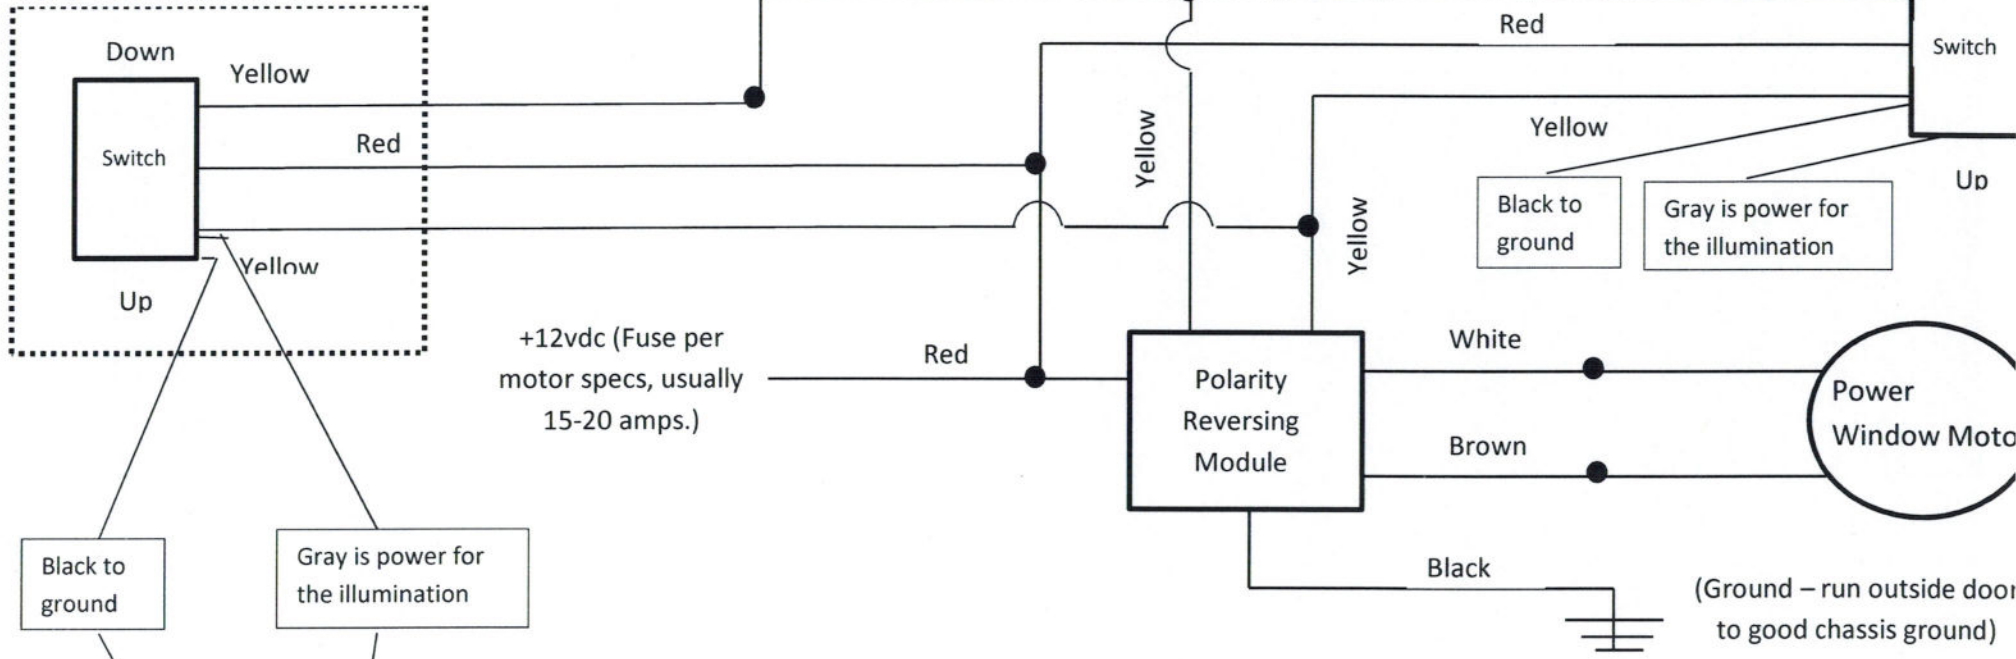

**DISCONNECT MAIN POWER AT THE BATTERY**  
**BEFORE DOING ANY WIRING!**

**Switch Panel Template**

This single switch represents one switch of the two switches on the driver Switch Master Panel.
